

DNA/RNA MAGNETIC SEPERATION PLASTICS

>>>FOR KINGFISHER & MagMax etc....

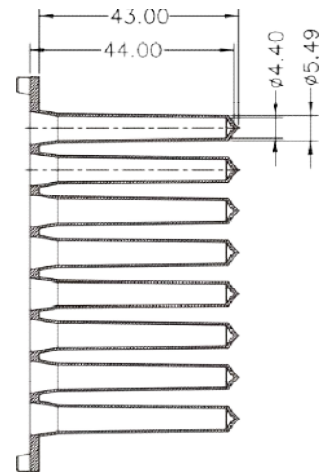

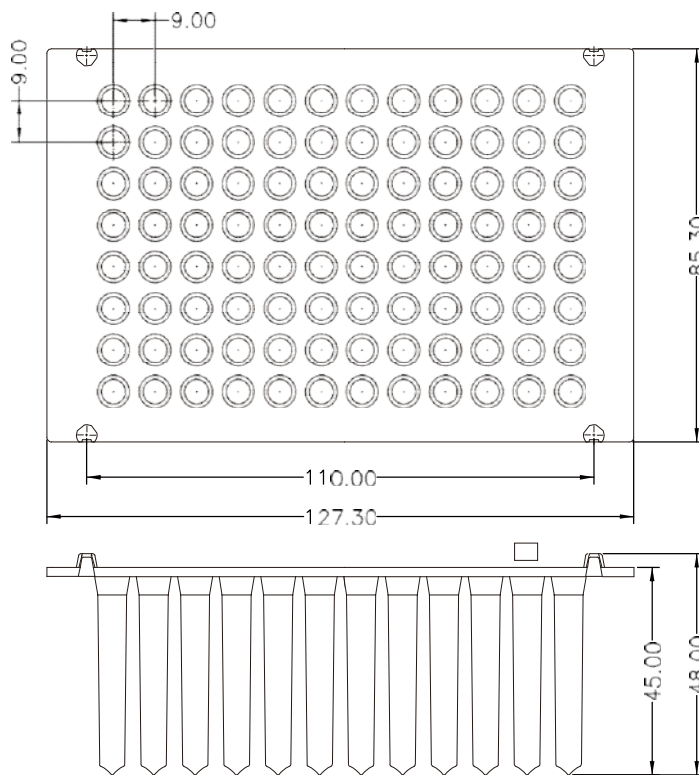

These Tip combs & DWP are for use with Automation DNA/RNA Extraction Systems 96/8 Deep-Well Head Magnetic Particle Processor & 96 Deep-Well Magnetic Particle Processor in combination with Magnetic bead based kits.

Optimize performance using our consumables designed specifically for use with these instruments. IGNEUS disposable plastics (tip combs and microplates) are made of polypropylene and are ideal for magnetic particle processing because of their low binding affinity for biomolecules. Their special design enables excellent recovery of magnetic beads.
